

EVOLUTION

A

MATHEMATICAL

IMPOSSIBILITY

James Beck

Evolution, a Mathematical Impossibility demonstrates through simple probabilities and real-life examples how it would be impossible for life to form or evolve by chance mutations, even given trillions upon trillions of years.

Today we know of the incredibly complex coding of DNA required for life to exist. Life cannot happen by chance mutation, just like a book cannot write itself.

The letter sequencing in a book must be in a specific order to convey its message. Likewise, the much more complex sequencing of DNA code in the cell is required for life to exist.
